### **DETAILED ACTION**

The receipt is acknowledged of applicants' request for extension of time, request for RCE, and amendment, all filed 04/15/2005.

Claims 1, 3-6, 8 and 9 are pending and included in the prosecution.

#### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 04/15/2005 has been entered.

#### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 1615

3. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

4. Claims 1, 3-6, 8 and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over US 4,849,141 ('141) in view of the article "collagen-biomaterial for drug delivery" by Friess.

US '141 method for preparing formulation comprising collagen, solvent and glucose, said method comprising mixing of the ingredients (abstract). The formulation is cross-linked using UV irradiation or gamma irradiation (col.6, lines 48-50). The formulation is suitable for implantation and can take the shape of sheet-like (col.7, lines 1-5).

The reference does not teach sterilization by gamma irradiation, however, the reference teaches the desire to preserve and stabilize the formulation by adding preservatives and stabilizers (col.7, lines 11-13).

Friess teaches that gamma irradiation is the method of choice to sterilize collagen biomaterials mainly for its high efficacy and accurately controlled dose (page 121 of the article, paragraph 3.5.2).

Therefore, it would have been obvious to one having ordinary skill in the art at the time of the invention to provide formulation comprising collagen and glucose that is cross-linked by UV radiation, and instead of stabilizing and preserving the formulation using stabilizers or preservatives as disclosed by US '141 the skilled artisan would gamma irradiate the formulation as disclosed by Friess, motivated by the teaching of Friess that gamma radiation is the method of choice to sterilize collagen biomaterials mainly for its high efficacy and accurately controlled dose, with reasonable expectation of having formulation comprising collagen and glucose that is cross-linked with UV radiation and subsequently sterilized efficiently and accurately by gamma irradiation wherein the formulation is stable at storage and sterile when ready to use.

### ***Response to Arguments***
